

BURNB PRODUCTS

Blockchain companies now need to be more universally trusted and they are on course as they developing useful and sellable products from already existing profitably sustainable business models. The products BURNB is rolling out in series is based on the current trends in the field of blockchain Namely 'meme', NFT, SWAP Dex, GiftCycle, bAirdrop iBblog, and many others.

Not devoid of challenges that BURNB will face, it will not stop until it has succeeded in bringing the whole cryptocurrency market 'face up'. BURNB ideology means that as a blockchain company, it will need a strong business skill set to build strong business based on trust. The blockchain market is still extremely young. With BURNB at the learning stage, it gives opportunities that will get even more compelling.

PRODUCT DESCRIPTION

Meme tokens are simply created for fun.

Therefore BURNB blockchain will be a meme token compatible with binance Blockchain and ethereum blockchain and its native currency BURNB can be added easily to swap platforms like pancakeswap, julswap, Uniswap.

Three simple functions

occur during each trade: Reflection, LP Acquisition, and Burn.

Features of BurnB token include (Reflection, Multichain, DEFLATIONARY, 0.001% yearly autoburn feature), Username based transfers)

BurnB will have Slippage of 10%. meaning by transacting burnb 2% will burn (added to a non recyclable burnb address. 5 autoadds liquidity to listed pairs tokens on the dex) while 3% will be added to holders . While to the receiver 0.0001% will autoburn without transacting each year when no transaction is made. In as much as users hold, they need to be active by just transacting at least once a year to allow activity of their token. Making Burnb coin have (1000 years as it's lifespan)

Also the platform should allow users to use usernames to send coins. And the Addresses should have usernames embedded in them that shows ownership.

Tokenomics:

Burnb has a total supply of 1,000,000,000,000,000,000

40% for the ICO sale where 30% will be for initial ICO and 10% for Buys from airdropers.

10% of Burnb to the Liquidity Pool on PancakeSwap and other dex.

15% for Airdrop from 2021 to 2023

10% for Team and Marketing.

5% burned in bits based on variables of market from 2021-2022

10% for the foundation. (Boogers, Exchange, Other miscellaneous expensing)

10% for exchange listings-(Auctionable).

Token creation platform: tBurnB

BurnB blockchain will allow anyone to create an ERC20, Binance token, HRC20 and any other blockchain based token without code by collateralizing a specified amount of burnb tokens to the dex.

eBurnB (Dex)-

BurnB dex (eBurnB) will be a multichain dex of all coins that will prevent dumping of any listed tokens by limiting trade to a range 0-1% of tokens held in exchange wallet at a time. while it will have a liquidity lock and burn feature. In case liquidity added falls below a limit specified (eg- when the liquidity of a token gets to 1 % of added due to dump, it will pause trade for that coin and team reviewed standing of project. Preventing holders on our dex from losing everything.

Liquidity added to a coin will be locked forever and cannot be removed. Unless reviewed.

bAirdrop-

This is an auto airdrop platform for any coin-

As 70% of interest is in airdrops, Burnb will harness that interest by allowing all newly created tokens to join and attract users by bAirdrop (bulk dropping tokens at a time) at a small charge. This will list the tokens to our dex.

Iblogle:

A page dedicated to blogging to the world, happenings of the cryptoverse

It also have strings for other blogs articles to show up.

Users must be able to vote the post and receive rewards.

AMA done on the telegram group will be posted here.

BurnBBay

This is a page added to the dex/website where new cryptocurrencies can be listed, voted, rated, and airdrops listed as well.

BurnBWallet

A secure place to store and trade your Burnb. Some features will include Simplex integration, dark mode, autopay, contacts list, hold to cancel haptic feedback, pay by username. Liquify asset. Stake.

bList is all about helping tokens get listed on bigger exchanges-

In bList, projects willing to dedicate a portion of their tokens to people ready to pull funds together in bits for the purpose of listing and marketing can list on our platform. (A kind of fundraising site where you exchange butter for bread)

This paper is editable by the owners and can be changed at any time.
